

PackMaster Optimizer

Mastering the full utilization of every fillet.

PackMaster Optimizer – optimal for retail

The PackMaster Optimizer is designed for retail processors who demand full utilization of every fillet. By combining intelligent weighing, scanning, and portion cutting, the system calculates the optimal cutting pattern for each muscle – ensuring consistent, fixed-weight portions with industry-leading accuracy.

Using advanced weighing and scanning ahead of the portion cutter, the system determines fillet density in real time, dynamically adjusting each cut to deliver superior portion accuracy and minimize raw material loss.

- Individual density calculation for every fillet
- Intelligent cut pattern optimization in real time
- Fixed-weight portioning with extremely tight tolerances
- Minimized giveaway – typically as low as 0.5–0.8%

Optimizer
in action.

The result is a highly efficient and sophisticated solution tailored for retail production, where consistency, presentation, and yield are critical. The PackMaster Optimizer enables producers to deliver a wide range of end-products while maintaining full control over quality and profitability.

- Maximize raw material utilization across all portions
- Deliver consistent retail-ready products in multiple formats
- Designed for high-performance retail environments

Applications:

- Fish fillets for fixed-weight retail packs
- Portion-controlled products with tight weight tolerances
