Modular portioning lines

Cut out to grow your business

Flexible line solutions – from portioning to packing – cut out to keep workflows smooth, efficient, and ready to grow with your business.

Setting new seamless standards – from portioning to packing!

The Modular portioning lines from Borncut combine portioning, weighing, grading, sorting, and packing into one seamless workflow for fish, meat, and poultry processing.

Built on industry-leading expertise, every line is designed for maximum yield, accuracy, and operational efficiency. The modular setup works like building blocks, allowing you to configure any application or add-on to fit 100% to your production needs, while a centralized control system with real-time processing and a single interface keeps everything fully connected.

The result is the smartest portion cutting set-up until now, cut out for continuous adaption fast upgrades – and long-term business growth.

Scalable and Flexible Production

Modular line solutions tailored to everything from specialized operations to high-capacity processing.

Maximum Yield and Precision

High-accuracy portioning designed to optimize raw material utilization, consistency, and throughput.

Simplified Line Control

Centralized production control enables seamless operation, real-time adjustments, and improved efficiency.

Modular portioning lines – cut out for maximum flexibility and yield

Watch the Cube Master Line in action.

The Cube Master Line

Compact, synchronized high-capacity portioning system combining BC 225 and BC100 for maximum output and yield.

- Triple the speed, one-third the space
- 1,200 mm belt speed per second
- 1 kHz scanning for next-level precision

Watch the PackMaster Hybrid in action.

The Packmaster Hybrid

Adaptive food service portioning system designed for flexible, multi-product production with real-time grading and cutting optimization.

- Real-time grading and adaptive portion control
- Simultaneous multi-product output
- Optimized raw material utilization

Watch the PackMaster Optimizer in action.

The Packmaster Optimizer

Retail-focused fixed-weight portioning system with intelligent real-time cut optimization for minimal giveaway.

- Individual density calculation per fillet
- Real-time cut pattern optimization
- Fixed-weight portions with only 0.5–0.8% giveaway

Watch the PackMaster Cut2tray in action.

The Packmaster Cut2Tray

High-volume cut-to-tray system combining cutting, weighing, and sorting in one continuous flow.

- Real-time laser-based weight measurement
- Dynamic cutting combination selection
- Integrated trim and fillet sorting for yield recovery

Borncut. Modular portioning lines

From high-capacity cube cutting to intelligent retail portioning and cut-to-tray systems – every solution is cut out to grow your business through maximum yield, precision and production efficiency.
